PROFESSIONAL SUMMARY

Cybersecurity engineer with 7+ years bridging SOC operations, detection engineering, and full-stack development. Writes custom KQL/EQL detection rules mapped to MITRE ATT&CK while triaging 50-80+ daily security events across 150+ facilities. Builds production threat intelligence platforms, mobile threat hunting tools, and detection-as-code pipelines. Background in Python, React, and Node.js means I build the tooling analysts need, not just triage alerts.

TECHNICAL SKILLS

Detection & SIEM: Elastic Security, Kibana, Microsoft Defender, AWS GuardDuty, KQL, EQL, Sysmon, Sigma, MITRE ATT&CK

Cloud: AWS (CloudTrail, IAM, CLI), Docker, PostgreSQL, Firebase, CI/CD, GitHub Actions

Languages: Python, JavaScript/TypeScript, Bash, PowerShell, SQL

Development: React, Next.js, Node.js, Express, REST APIs, Git, Linux/Windows Internals

Compliance: NIST CSF 2.0, NIST SP 800-53/800-61, ISO 27001, OWASP Top 10

PROFESSIONAL EXPERIENCE

Security Operations Center Operator | Amazon (contracted through SIS) | June 2023 – Present

- Reduced incident response time by 66% while triaging 50-80+ security events per shift across 150+ facilities, maintaining 100% SLA compliance with average MTTR under 5 minutes and MTTR under 15 minutes.
- Eliminated approximately 35% of false positives by analyzing access control telemetry, video surveillance data, and system logs, escalating only verified high-severity threats.
- Translate technical findings into actionable risk assessments for site security managers and engineering teams, driving organizational threat awareness.
- Mentor new SOC operators on triage procedures and detection rule interpretation.

Cybersecurity Developer (Work-Study) | Purdue University Global | May 2026 – Present

- Diagnosed and resolved 20+ lab environment issues per semester, reducing student downtime by about 40%, while authoring 15+ custom KQL/EQL detection rules for student labs.
- Serve as Tier 2/3 technical escalation point for virtual lab infrastructure, maintaining high system availability.

Software Engineer | Innocelf, LLC | Feb 2022 – Mar 2024

- Built secure web applications across 10+ production deployments (Python, React, Node.js, SQL), embedding RBAC, MFA, and OWASP Top 10 defenses to eliminate 100% of critical web vulnerabilities prior to release.
- Enforced automated secrets scanning via .env/.gitignore pipelines across 15+ repositories, preventing credential leaks and client-side exposure.
- Led security requirements gathering for 5 client engagements, translating business needs into OWASP-aligned technical controls.

Software Engineer | Freelance / Self-Employed | Aug 2019 – Feb 2022

- Developed 12+ custom full-stack web applications with robust SQL input validation and secure authentication workflows, achieving 99.9% application uptime.
- Designed database schemas and optimized queries for 12 client applications, reducing average query time from 200ms to 45ms.

TECHNICAL PROJECTS & SECURITY TOOLS

Mobile Threat Triage Engine | Python, iSH (Alpine Linux), Proxyman, HAR Parsing | [GitHub](#)

- Developed on-device iOS threat hunting analyzing 480+ HTTP/HTTPS flows across 300+ domains; identified 12 suspicious TLDs, 5 cleartext authentication headers, and 3 C2 beaconing patterns via TLS decryption without desktop dependencies.

ApexIntel – CTI Aggregator & Automated Intelligence Engine | Python, REST APIs, Firebase, React, GitHub Actions | [Live App](#) | [GitHub](#)

- Aggregated 10,000+ daily IoCs across CISA KEV, FIRST EPSS, VirusTotal, and AbuseIPDB with 99%+ accuracy; engineered 99.9% uptime with rate-limit handling and reduced analyst enrichment time by approximately 70%.

SOC Threat Detection & SIEM Suite – Detection Engineering & Response Portfolio | Elastic Security, Kibana, Sysmon, KQL, EQL, Linux EVTX | [GitHub](#)

- Engineered 10 multi-stage enterprise attack simulation labs (SSH brute-force, credential harvesting, cloud compromise) and authored 30+ custom KQL/EQL detection rules, achieving 95%+ detection coverage across 12 targeted MITRE ATT&CK tactics.

SentinelGRC – Multi-Tenant GRC & Compliance Platform | TypeScript, Node.js, React, PostgreSQL, Firebase | [GitHub](#)

- Engineered a multi-tenant GRC platform automating 150+ NIST CSF 2.0 and SP 800-53 control mappings, cutting compliance tracking overhead by ~60% while enforcing tenant isolation and RBAC via Firebase Authentication.

AWS CloudTrail & GuardDuty Incident Lab – Cloud Incident Response & Containment | AWS CLI, GuardDuty, CloudTrail, IAM, Python | [GitHub](#)

- Simulated complex IAM cloud compromise; correlated GuardDuty alerts with CloudTrail logs to reconstruct attacker timelines and developed automated Python containment scripts that reduced credential revocation response time from 20 minutes to less than 30 seconds.

Investigations & Security Operations

Senior Loss Prevention Agent | Ross Stores | May 2016 – June 2019

- Led 50+ internal and external theft investigations across 4 retail locations, directly recovering \$85K+ in stolen merchandise.
- Mentored teams on evidence collection procedures, bringing investigative rigor to digital security operations.

CERTIFICATIONS & EDUCATION

Certification: CompTIA Security+ ce (ID: COMP001023116540)

Education: B.S. Cybersecurity, Purdue University Global | GPA: 3.96 | Expected graduation: Jan 2027
