PROFESSIONAL SUMMARY

Cybersecurity professional with 7+ years across security operations, detection engineering, and software development — built on a foundation from U.S. Navy systems maintenance. Specializes in incident response and security automation; builds deployed threat intelligence platforms, mobile threat hunting tools, and detection-as-code pipelines. Python, React, and Node.js background means I build the tooling analysts need, not just triage alerts.

CERTIFICATIONS & EDUCATION

Certification: CompTIA Security+ CE

Education: B.S. Cybersecurity, Purdue University Global | GPA: 3.98 | Expected graduation: Jan 2027

TECHNICAL SKILLS

Detection & SIEM: Elastic Security, Kibana, AWS GuardDuty, KQL, EQL, Sysmon, Sigma, MITRE ATT&CK

Cloud: AWS CloudTrail, IAM, AWS CLI, Firebase, PostgreSQL

Programming: Python, JavaScript/TypeScript, SQL, PowerShell

Security Engineering: CI/CD, GitHub Actions, REST APIs, Linux, Windows Internals

Development: React, Node.js, Git

Security Risk & Governance: NIST CSF 2.0, NIST SP 800-61, ISO 27001, Security Risk Assessment, Security Controls, SOP/Procedure Development, OWASP Top 10

PROFESSIONAL EXPERIENCE

Security Operations Center Operator | Amazon (contracted through SIS) | June 2023 – Present

- Triageed 50-80+ security events per shift across 150+ facilities, while supporting 100% SLA compliance with average Mean-Time-To-Detect (MTTD) under 5 minutes and Mean-Time-To-Respond (MTTR) under 15 minutes.
- Improved alert triage accuracy by analyzing access control telemetry, video surveillance data, and system logs, escalating only verified high-severity threats.
- Collaborated with cross-functional security teams to communicate incident findings, coordinate escalations, and support prompt resolution of security events.
- Created standardized triage procedures and documentation templates, reducing new operator onboarding time and improving response consistency.
- Mentor new SOC operators on triage procedures and detection rule interpretation.

Cybersecurity Developer (Work-Study) | Purdue University Global | May 2026 – Present

- Diagnosed and resolved 20+ lab environment issues per semester, reducing student downtime by about 40%, while authoring custom KQL/EQL detection rules for student labs.
- Serve as Tier 2/3 technical escalation point for virtual lab infrastructure, keeping high system availability.

Software Engineer | Innocelf, LLC | Feb 2022 – May 2023

- Built secure web applications across 10+ production deployments (Python, React, Node.js, SQL), embedding RBAC, MFA, and OWASP Top 10 defenses into release workflows.
- Led cross-functional meetings with technical teams and leadership to evaluate security controls, processes, and risk assessments.

Software Engineer | Freelance / Self-Employed | Aug 2019 – Feb 2022

- Developed 12+ custom full-stack web applications with robust SQL input validation and secure authentication workflows, achieving 99.9% application uptime.
- Designed database schemas and optimized queries for 12 client applications, reducing average query time from 200ms to 45ms.

TECHNICAL PROJECTS & SECURITY TOOLS

Mobile Threat Triage Engine | Python, iSH (Alpine Linux), Proxyman, HAR Parsing | [GitHub](#)

- Built a zero-dependency iOS mobile threat hunting tool that analyzes network traffic entirely on-device without jailbreaking. Captures Layer-7 HTTP/HTTPS flows via Proxyman's TLS-decrypting loopback proxy and parses exported HAR files within iSH's Alpine Linux userspace.
- Engineered automated detection for cleartext HTTP transport, plaintext HTTP Basic Auth credential exposure, and destination domains matching high-abuse TLD patterns (.xyz, .top, .buzz, .tk, .cc), generating structured Markdown incident-triage reports.

ApexIntel – CTI Aggregator & Automated Intelligence Engine | Python, REST APIs, Firebase, React, GitHub

Actions | [Live App](#) | [GitHub](#)

- Built a pipeline ingesting live threat feeds from CISA KEV and FIRST EPSS, normalizing multi-format data into unified JSON threat objects with resilient fallback/proxy handling for API outages.
- Developed a Python detection-compiler module that evaluates indicators against risk thresholds (CISA KEV presence, EPSS score > 0.80) and auto-generates production-ready Elastic Security KQL queries and Sigma rules.

SOC Threat Detection & SIEM Suite – Detection Engineering & Response Portfolio | Elastic Security, Kibana, Sysmon, KQL, EQL, Linux EVTX | [GitHub](#)

- Built a 9-lab SOC analyst portfolio spanning SSH brute-force detection, phishing investigation, and playbook design, EDR/Sysmon telemetry analysis, CISA advisory risk analysis, and a 500-user phishing risk assessment with departmental vulnerability modeling.
- Designed and executed an end-to-end multi-stage attack simulation (reconnaissance to SSH brute force to credential harvesting to shell execution) across a Kali Linux/Ubuntu environment, writing custom EQL/KQL queries mapped to MITRE ATT&CK techniques (T1595, T1110, T1059.004, T1078).

SentinelGRC – Multi-Tenant GRC & Compliance Platform | TypeScript, Node.js, React, PostgreSQL, Firebase |

[GitHub](#)

- Architected a multi-tenant GRC platform with JWT-claim-based tenant isolation and a quantitative 5x5 risk-scoring engine (Impact x Likelihood), mapping findings to NIST CSF 2.0, ISO 27001, and SOC 2 controls with immutable, append-only audit logging.
- Built a CI/CD pipeline running automated Firebase security-rule tests and dependency/SAST scanning on every pull request.

AWS CloudTrail & GuardDuty Incident Lab – Cloud Incident Response & Containment | AWS CLI,

GuardDuty, CloudTrail, IAM, Python | [GitHub](#)

- Investigated a simulated IAM credential-compromise scenario, correlating GuardDuty findings with CloudTrail event logs to reconstruct the attacker's timeline.
- Produced a formal SOC-style incident report covering detection hypothesis, IOCs, impact assessment, and remediation steps (credential rotation, policy review).

Investigations & Security Operations

Asset Protection Agent | Nordstrom | June 2019 – May 2023

- Conducted surveillance and investigations, resolving 150+ theft incidents in 2022; earned the Most Apprehensions Award for detection and response performance.
- Trained and mentored 5 team members and delivered security awareness training to leaders; created standardized investigative procedures that improved documentation quality; named team MVP (2022).

Senior Loss Prevention Agent | Ross Stores | May 2016 – June 2019

- Led 50+ internal and external theft investigations across 4 retail locations, directly recovering \$85K+ in stolen merchandise.
- Mentored security and management teams on loss prevention procedures, analytical awareness, critical thinking; developed a standardized procedure to implement storewide.

Military Experience

Systems Maintenance Technician | U.S. Navy | Mar 2014 – May 2016

- Maintained and troubleshooted mission-critical shipboard combat and electronic systems, achieving 95%+ system uptime in high-availability operational environments.

- Diagnosed hardware and network issues across fiber/copper infrastructure and performed preventive maintenance to ensure continuous operational readiness.
